What this release verifies

Version 2.1 compares rules, repository text, PDF content, HTML snapshots, and final submission copy. It presents an exportable summary after the audit completes.

Release note

The Evidence Graph remains disabled in this archived build. Version 3.0 is planned to add graph navigation and the expanded eight-artifact evaluation.

IMPLEMENTATION SNAPSHOT

Audit pipeline

This archived configuration uses the model shown below for semantic comparison. Hash verification and archive inventory are computed deterministically.

Stage	Implementation	Authority
Inventory	ZIP traversal and file metadata	Deterministic
Integrity	SHA-256 comparison	Deterministic
Semantic audit	gpt-4.1-mini	Model extracted
Evidence graph	Disabled	Not available

Known limitations

This archived report is not the final release record. It does not demonstrate a public deployment, narrated video, or Evidence Graph.
